

Report on engineering capacity in sub-Saharan Africa

Over the past two years, Engineers Against Poverty (EAP) has lead research, on behalf of the A-UK Partnership, into capacity building needs in the engineering sector in Sub Saharan Africa. EAP and the Academy have carried out a number of interviews with key stakeholders in the engineering sector in Sub Saharan Africa.

The Partnership is also gathering results from two widely distributed surveys to gather views of both professional engineers and the decision makers who interact with them on how the formation, status and impact of engineers in Africa can be improved. If you are an engineer working in Sub-Saharan Africa or a decision maker from the business, policy or donor communities who interacts with engineers in Sub-Saharan Africa, we would like to hear from you. Please use the links below to reach the survey:

[Survey for professional engineers](#)

[Survey for decision makers](#)

It is anticipated that when it is published in early 2012, this report will make a significant contribution to the existing literature in this area, as well as helping to direct and inform the future activities of the Partnership.
