ENGINEERING

Distinguished Visiting Fellowships

The aim of the Distinguished Visiting Fellowships scheme is to help UK universities to build capacity and promote collaborations by facilitating visits from distinguished international experts.

The scheme provides funding to enable an academic engineering department in a UK university to host a Distinguished Visiting Fellow from an overseas centre of excellence for up to one month.

The scheme's objectives are to:

- Access global centres of excellence in engineering research and teaching, with a view to strengthening UK capacity and international standing and promoting new international collaborations.
- Enable the participating organisations to discover common and complementary skills and initiatives that could form the foundation for future collaborations and strategic research alliances.
- Facilitate the sharing of latest developments, experience and information, and diverse knowledge in engineering and technology between participating organisations by enabling the host institution to engage the Fellow in a range of mutually beneficial activities.
